Section: _____

You have 12 minutes to complete the quiz. Please **show all work**, and then **write your answer on the line provided**.

1. Suppose you eat $1/4$ of a 6" radius pizza. What is the length of crust that you have eaten?

1 pt for $\pi/2$ formula
1 pt for answer

$$\begin{aligned} \text{arc length} &= (\text{angle})(\text{radius}) \\ &= \frac{\pi}{2} \cdot 6 \\ &= 3\pi \text{ inches} \end{aligned}$$

2. Let $\theta = \frac{-4\pi}{3}$. Find the reference angle, then find $\sin(\theta)$, $\cos(\theta)$, and $\tan(\theta)$.

$$\begin{aligned} \text{opp} &= \sin(\text{ref } \theta) = \frac{\sqrt{3}}{2} \\ \text{adj} &= \cos(\text{ref } \theta) = \frac{1}{2} \end{aligned}$$

1 pt each answer

Partial credit possible if graphed θ

Only 1 pt diff if consistently confuse trig values of $\pi/3$ w/ those of $\pi/6$

Reference angle: $\frac{\pi}{3}$

y-coord pos $\Rightarrow \sin(\frac{-4\pi}{3}) = \frac{\sqrt{3}}{2}$

x-coord neg $\Rightarrow \cos(\frac{-4\pi}{3}) = -\frac{1}{2}$

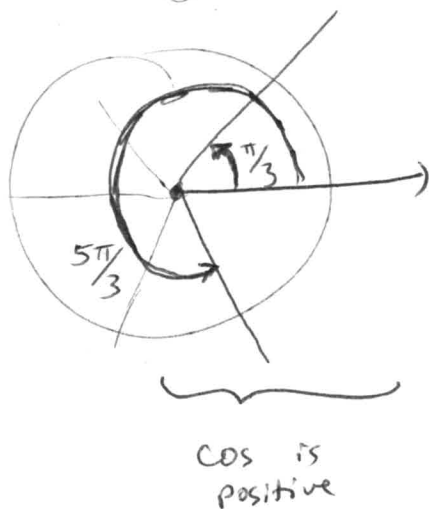

$\tan(\frac{-4\pi}{3}) = \frac{\frac{\sqrt{3}}{2}}{-\frac{1}{2}} = -\sqrt{3}$

3. Suppose that $\cos(\theta) = \frac{1}{2}$. Find θ .

$$\cos(\text{ref } \theta) = \frac{1}{2}$$

$$\Rightarrow \text{ref } \theta = \frac{\pi}{3}$$

all solutions

$$\theta = \frac{\pi}{3} + 2\pi n$$

or

$$\theta = \frac{5\pi}{3} + 2\pi n$$

} for some integer
n
